Preface	17
Reading guide	20
Abbreviations used	20
PART I Introduction to functional disorders	23
CHAPTER 1	
Background	25
Terminology used	27
CHAPTER 2	
Prevalence	29
Prevalence of physical symptoms	29
Prevalence of functional disorders	31
Bodily distress syndrome	32
Health anxiety	32
Consumption of health and social services	33
CHAPTER 3	
Symptoms, clinical findings and the diagnostic process	35
Classification and definition	35
Common symptoms of stress and strain	36
Physical symptoms	37
Emotional symptoms	38
Cognitive symptoms	39
How to make a diagnosis	40
What is demanded of a diagnosis?	40
Making a diagnosis in clinical practice	41

CHAPTER 4

Classification and characteristics	43
Classification of patients with functional symptoms	43
I. Symptom diagnoses: Mild and transient symptoms	45
II. Natural reactions to strain or stress	46
III. Distress, stress and adjustment reactions	47
IV. Bodily Distress Syndrome (BDS)	48
V. Health anxiety	52
VI. Dissociative disorders	55
VII. Factitious disorder and Münchhausen's syndrome	56
VIII. Malingering	57
IX. Physical symptoms and illness worries in other mental disorders	58
X. Psychological factors affecting a medical condition	59
Diagnosis and differential diagnosis	60

CHAPTER 5

Aetiology	63
Causes	63
Predisposing and precipitating factors	64
Perpetuating factors	65

CHAPTER 6

Biological basis	69
Biological mechanisms	69
Pathological central processing and modulation of physical stimuli	70
Increased symptom production	72
Conclusion	74

CHAPTER 7

The interaction between the doctor and patients with functional disorders	75
Mismatch	75
The doctor's contribution (iatrogenic factors)	76
The fear of overlooking a physical disease	77
The fear of complaints and prosecution	78
Absence of other treatment	78
Lack of understanding of the nature and character of the illness	79
Lack of knowledge in handling functional disorders	80
The doctor's personality and perception of his/her role as a medical professional	81

Modesty	82
Pandora's Box or the fear of loss of control	82
The fear of dependency	82
Time pressure	83
CHAPTER 8	
The patient's symptom perception and illness beliefs	85
Previous experience and internal evaluation	87
External sources	88
PART II Treatment	91
CHAPTER 9	
Overview of treatment options	93
The medical specialist and general hospital specialist departments	96
The general practitioner (GP)	97
Specialised treatment	97
Pharmacological treatment	99
CHAPTER 10	
Ensuring a good doctor-patient relationship	101
Avoid assuming a responsibility that is not yours	102
Form of communication	103
Acceptance of the limits of medicine	103
CHAPTER 11	
Primary assessment and treatment (TERM model)	107
Definition of own task in treatment and assessment	107
Considerations before the consultation	108
General conversation techniques	109
<i>Socratic questioning</i>	109
<i>Summaries</i>	111
<i>Express empathy (emotional feedback)</i>	112
TERM model step A: Understanding	113
A.1 Take a full symptom history	114
A.2 Explore emotional clues	115
A.3 Inquire directly about symptoms of anxiety and depression	116
A.4 Explore stressors and external factors (social, occupational and familial)	116
A.5 Explore functional level, handling of the illness (coping) and illness behaviour	117

A.6 Explore the patient's illness beliefs (and wait to tell your own)	118
A.7 Explore the patient's expectations to the examination and treatment	119
A.8 Make a focused clinical examination and any indicated paraclinical examinations	119
TERM Model step B: The GP's expertise and acknowledgement	120
B.1 Provide feedback on findings	120
B.2 Acknowledge the reality of the symptoms	121
B.3 Explain that there is no indication for further tests or treatments	121
TERM model step C	122
General conversation techniques	123
<i>Avoid conflict</i>	123
<i>Support self-help and own control (empowerment)</i>	123
TERM-model step C: Negotiation of a new or modified model of understanding	124
C.1 Clarify the patient's illness beliefs	124
C.2.A Clarify possible and impossible causal explanations	124
C.2.B Treatment of mild cases	125
C. 2.B. a <i>Qualifying normalisation and reassurance</i>	125
C. 2.B. b <i>Reaction to strains, stress or nervousness</i>	125
C. 2. B. c <i>Demonstration/presentation of possible associations</i>	126
C.2.C Treatment of severe cases	127
C. 2.C. a <i>The disorder is known and has a name</i>	127
C.2.C. b-c <i>Cause unknown but possible biological basis</i>	127
C. 2.C. d <i>Coping – the importance of behaviour regardless of cause</i>	128
TERM Model step D: Summary and planning of further treatment course	128
TERM Model step E: Management of chronic disorders	129
Status consultation	130
<i>Before the consultation</i>	130
<i>During the consultation</i>	132
<i>The limits of medicine (medical science)</i>	133
General advice on management of chronic functional disorders	133

PART III Follow-up treatment 141

CHAPTER 12

Follow-up treatment	143
Mild cases with functional somatic symptoms	143
Moderate functional disorders	143

Severe functional disorders	144
Referral to a specialist	144
CHAPTER 13	
Contents of the follow-up treatment	145
Follow-up consultations	146
Follow-up consultations – general aspects	147
Problem-solving model	148
Basic concepts in cognitive therapy	149
The basic model for cognitive functional disorders	151
Modification of dysfunctional assumptions and actions	151
Dysfunctional illness beliefs	152
Coping – provoking and relieving factors	153
Graded exercise therapy and activation	153
Steps of objectives and list of goals	155
CHAPTER 14	
Example of a course of conversations in primary care	157
Background	157
The first regular consultation	158
The second regular consultation	159
1st conversation	159
2nd conversation	160
3rd conversation	161
4th conversation	162
5th conversation	163
6th conversation	163
7th conversation	164
PART IV Children	167
CHAPTER 15	
Children	169
Introduction	169
Special factors in children	169
Frequency	170
Clinical presentation	171
Diagnostic criteria	171
Family factors	171
Diagnostic assessment	172

Medical history	172
Questionnaire	173
Observation	173
Physical examination	173
Para-clinical examinations	174
Additional information	174
Treatment	174
Mild to moderate functional symptoms	174
Severe functional symptoms	175
When the parents' illness behaviour complicates recovery	175
Medicine	175
CHAPTER 16	
Cultural approaches to the study of functional disorders	177
Background – anthropology and the body	178
The study of somatisation – a historical perspective	179
The discussion on culture-bound syndromes (CBS)	179
The 70s: Criticism of biomedicine and focus on the illness experience	181
The 80s: Further development	183
Sociosomatics	184
The 90s: Embodiment and context	186
CHAPTER 17	
Medico-historical background	191
The migrant uterus	193
Seminal retention	195
Like possession	195
Reflex theory	196
Hysteria as a psychological/neurological disorder	200
Organic brain disorder	201
Mental illness	203
Psychoanalysis	204
Hysteria in the 20th century	206
Psychosomatics	208
Psychogenesis	209
Holism or the biopsychosocial model	210
Somatoform disorders	211
Somatisation disorder	211

Hypochondriasis	213
Syndrome diagnoses	214
Neurasthenia and chronic fatigue syndrome (CFS)	214
Fibromyalgia	215
Disordo factitious and Münchhausen’s syndrome	216
References	219
Supplementary material	237
Patient materials	237
Leaflets	237
Homepages	237
Supplementary reading	237
Appendices	239
Appendix 1	239
Weekly registration form	239
Appendix 2	240
CMDQ Index (Common Mental Disorders Questionnaire)	240
Appendix 3	242
Problem-solving model	242
Appendix 4 A-B	243
Automatic and alternative thoughts ad behaviour model	243
Appendix 5	245
Illness and symptom interpretation	245
Appendix 6	246
Steps of objectives	246
Appendix 7	247
List of objectives	247
Appendix 8	248
Two-stage pathway model – children	248
Appendix 9	249
CSI – parents report	249
Index	253
